Military maintenance personnel are periodically required to perform Preventative Maintenance Checks and Services (PMCS) on night vision equipment. This tool set will simplify the disassembly and reassembly of the AN/AVS-6 and AN/AVS-9 night vision goggles both in maintenance facilities and in the field. The torque drivers in this tool set are factory calibrated to the torque values proven by goggle manufacturing processes to provide the best lock ring, purge valve, setscrew, and tube retainer ring tightness without overstressing. Torque lock rings, purge valves, setscrews and retainers with these torque drivers/adapters has proven to provide the best means for securing critical goggle parts while eliminating the breakage and thread stripping that is often associated with hand tightening.

Export of this product is regulated by U.S. Department of Commerce, Bureau of Industry and Security, EAR, Title 15, Chapter VII, Subchapter C, Parts 730-774 .

INNOVATION FOR A SAFER TOMORROW
